ARIF AHMAD KHAN

AI Engineer | Agentic AI & RAG Systems

ahmadarif238@gmail.com | +92 343 8992587 | Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

AI Engineer specializing in agentic AI and Retrieval-Augmented Generation (RAG) systems, with a track record of building production multi-agent workflows using LangGraph and LangChain, and scalable APIs with FastAPI. Experienced in enterprise process automation on Microsoft Power Platform and Azure, and in deploying LLM-based assistants grounded in vector databases. Has independently designed, shipped, and operated multiple autonomous, production-ready AI agents that resolve real operational problems across sales lead generation, customer ordering, legal document review, and internal tax and finance workflows, complemented by full-stack development experience in React, Node.js, and TypeScript for building the dashboards and interfaces that support these agents.

CORE SKILLS

Agentic AI & LLMs: LangGraph, LangChain, RAG & Vector Search, Ollama, Hugging Face Transformers, Groq, Cerebras, OpenAI, Anthropic Claude, Google Gemini, Prompt Engineering

Backend, Cloud & DevOps: Python, SQL, FastAPI, AWS, Microsoft Azure, Vercel, Docker, Git, Azure DevOps, Pinecone, Weaviate, FAISS, PostgreSQL, MySQL, Supabase

Web Development: React, Node.js, TypeScript, and JavaScript, applied to building agent dashboards and customer-facing interfaces

ML & Automation: TensorFlow, Keras, Scikit-learn, Pandas, NumPy, n8n, Zapier, Make, Microsoft Power Automate & Power Platform

PROFESSIONAL EXPERIENCE

AI Engineer at Int. Dublin Tax Company Ltd. *Present*

- Build and manage AI-driven automation workflows on Microsoft Power Automate and the Power Platform, reducing manual processing across internal tax and accounting operations.
- Develop AI-powered virtual agents (Power Virtual Agents) and support enterprise cloud infrastructure on Microsoft Azure.
- Design and deploy intelligent process-automation assistants used across internal teams.
- Develop and ship AI agents, workflows, and custom copilots supporting internal tax and financial operations (implementation details confidential due to the sensitivity of client financial data).

Computer Vision Intern at ITSOLERA Pvt. Ltd. *Jul 2024 to Oct 2024*

- Built real-time pedestrian detection pipelines in Python and OpenCV, robust to low-light, rain, and fog conditions.

SELECTED PROJECTS

Client-Hunting & Lead-Generation Agent for AgentCraft AI Automations *(Python, Web Scraping, LLM Personalization)*

- Production agent (private repository) built for a company, AgentCraft AI Automations, that scrapes Google Maps for US businesses (dentists, law firms, real estate, etc.), pulls their websites, and evaluates each one for AI automation, chatbot, AI receptionist, or web development opportunities.
- Auto-drafts and sends ~80 personalized cold emails and follow-ups per day based on each prospect's specific gap, stores contact details (phone/WhatsApp, email, location, niche), and emails decision-makers the moment a prospect replies.
- Runs autonomously in daily production use as the primary client-acquisition channel for AgentCraft AI Automations.

WhatsApp AI Ordering Agent for a Fast-Food Business *(WhatsApp API, LLM, Speech-to-Text, React, Node.js)*

- Production WhatsApp agent deployed for a local fast-food business with full menu, pricing, and media (images/video) knowledge; converses with customers in English, Urdu, and Roman Urdu, including transcription of voice-message orders, through to order placement.
- Built the companion React/Node.js dashboard staff use to confirm orders into the kitchen and relay real-time status updates back to customers on WhatsApp.

- Live in production, handling real customer orders end-to-end for the business daily.

ContractIQ: Legal Agreement Analysis *(LangGraph, Agentic AI)*

- Autonomous multi-agent system with a zero-hallucination architecture that analyzes, verifies, and benchmarks complex legal agreements.
- Specialized agents split risk reasoning from clause/lifecycle extraction to keep outputs traceable and reduce false positives.

SalesAI: B2B Sales Automation *(FastAPI, Agentic AI)*

- 4-agent system automating B2B lead generation, scoring, and engagement; cut manual sales research time by 60%.
- Full-stack orchestration layer coordinating sub-agents end-to-end from prospect discovery through outreach.

VivaGraph AI: Oral Exam Simulator *(LangGraph, Agentic AI)*

- 7-agent platform with real-time voice analysis, filler-word detection, and dynamic difficulty adjustment.
- Cognitive-core design lets each agent specialize (evaluation, coaching, difficulty-tuning) while sharing a single exam session state.

EDUCATION & CERTIFICATIONS

B.S., Software Engineering, University of Malakand (CGPA 3.65/4.0) *2021 to 2025*

Machine Learning Specialization & Deep Learning Specialization, Andrew Ng, Coursera
Understanding Agentic AI, AgentAcademy | Fundamentals of Agents, Hugging Face (2025)
